Client information

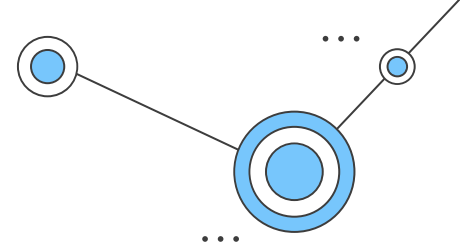

chuqlab

Chuqlab

- Dedicated partners in stopping crime
- Prioritize markets and industries that are severely underserved by the technology community.
- Design solution to be nimble and adaptive
- Investigators no longer need to spend hundreds of hours sifting through all of the audio files manually.
- Cornelius CEO of Chuqlab has been main contact for Crime Miner

Mentor feedback

Mentor Feedback

- Security is an important issue
 - Have it open and just protected with a password is a huge risk
 - have it behind api gateways or dynamic routing to make website is only public access
- Hard coding the bucket name may be an issue
- Use cloudfront, cloud 53,

Client feedback

Uploading files feedback

- Worried about the problems that scanning frame by frame would cause
- Overall questions with what we plan to do with and question those plans
- Looks good, lots of progress from last iteration
- User friendly, focus on the connection

Iteration 2 Features

Iteration 2 features

A decorative line with circles in the top right corner. It starts with a small circle, goes to a medium circle, then to a large circle, and ends with another small circle. There are ellipses at the end of the line.

Manage files to “solve the case!”

The user can create cases, upload related files, and control their experience with the case.

Angular Web Application Interface

Have a user journey for a police officer.

Utilize Machine Learning to Get Needed Information

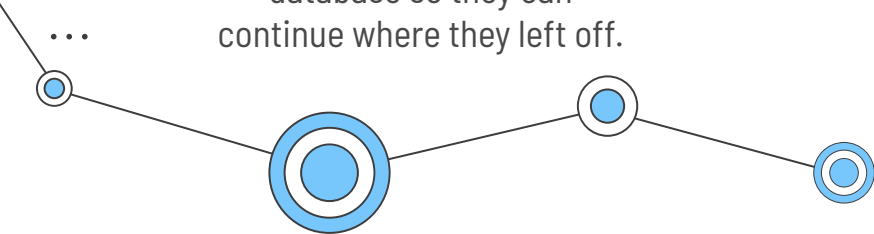

The user can process videos to look for whatever is relevant to their case.

The Workspace isn't Going Anywhere

The user's files are saved locally in a PostgreSQL database so they can continue where they left off.

Do Multiple Tasks Simultaneously and Faster

The user can do some work on a case, have video processing run in the background, and go do something else.

A decorative line with circles in the bottom left corner. It starts with a small circle, goes to a large circle, then to a medium circle, and ends with another small circle. There are ellipses at the end of the line.

Data persistence

Saving User Data With Our PostgreSQL Database

A Remote PostgreSQL Database to contain all user case data, allowing users to save any information pertaining to their case.

Speed up Recognition jobs

```
async function getLabelDetectionChunk(id: string, nextToken:string|undefined=undefined, clientToUse:RecognitionClient | any=client) {  
  try {  
    const parameters = {  
      JobId: id,  
      MaxResults: 20, // number of objects labeled before recieving results  
      NextToken: nextToken // token to recieve next batch  
    }  
  
    var command = new GetLabelDetectionCommand(parameters)  
    var finished = false  
    var result  
    while(!finished){  
      result = await clientToUse.send(command)  
      if (result.JobStatus == "SUCCEEDED") {  
        finished = true;  
        return result  
      }  
    }  
  
    return result || {error: "Could not get Label Detection Results"}  
  } catch (e) {  
    console.log('error', e)  
  }  
}
```

User Friendly(er) interface

The image shows a user interface for a Case Management (CM) system. On the left is a blue sidebar with icons for home, a folder, documents, a file, a camera, and settings. The main area has a header with 'NEW CASE' (active) and 'UPLOAD FILES'. Below is a 'New Case' form with sections for 'Basic Case Information', 'NAME', 'DESCRIPTION', and 'TAGS'. A 'Submit' button is at the bottom.

Iteration 2 Architecture

Iteration 3 features

Manage Files to View/Edit Case!

The user has enhanced control over their case, and can gather AWS information about what they're looking for

Visual Aids

The user can visualize the AWS JSON output in a way that makes sense to them

Angular Web Application Interface

Have a user journey for a police officer that goes in more depth of looking at the case

More Full Stack Features

The user just has to click a few buttons, and the servers will process and serve relevant information

Improve Object Detection

Either make reported labels from Rekognition searchable or pivot to Image analysis of video frames

Whatever the
hell I'm doing

Programmers looking
at programming memes

Doctors: Googling stuff online does not
make you a doctor.

Programmers:

NOT SURE IF I AM A GOOD
PROGRAMMING

OR GOOD AT
GOOGLING

DESIGNERS

Look, we have similar ideas.

No! You stole my idea.

PROGRAMMERS

Man, I stole your code.

It's not my code.

Omonbude Emmanuel
@BUDESCODE

To replace programmers with
Robots, clients will have to
accurately describe what they
want.
We're safe.
